Thirteen-Year Summary of Selected Medical,\(^1\) Prescription Drug Carve-Out & Dental Trends: 2003–2013 Actual & 2014–2015 Projected\(^2\)

Medical trends exclude prescription drug coverage.

Data for all 18 survey years is not shown due to space constraints. This 13-year summary graph differs from 10-year summary graphs that supplemented the 2007-2010 Segal Health Plan Cost Trend Surveys. Those summary graphs only showed projected trends. This graph, like the supplements to the 2011 through 2014 Segal Health Plan Cost Trend Surveys, shows actual trends for the years for which that data is available. All trends are illustrated for actives and retirees under age 65, except for the MA HMOs.

Prescription drug data for 2003–2007 only reflects retail. For 2008–2015, prescription drug retail and mail-order delivery channels are combined.

Note: Because the similarity in medical trend rates for actives and retirees under age 65 makes those data points difficult to read in the above graph, the next page features a graph that shows only those trend rates using a y-axis scale that makes the differences among those trend rates easier to see.

* Medical trends exclude prescription drug coverage.

This is an online supplement to the 2015 Segal Health Plan Cost Trend Survey. The survey report is available on the following webpage: http://www.segalco.com/publications/surveysandstudies/2015trendsurvey.pdf

Segal Consulting and Sibson Consulting are members of The Segal Group (www.segalgroup.net), which is celebrating its 75th anniversary this year.
